

ASIKO TV MONETIZATION GUIDE

The Soul of Africa · One Africa. One Market. One Destination. · 12 revenue streams, one page, all stacked together.

#	STREAM	WHAT IT IS	THE ASIKO MECHANISM	ILLUSTRATIVE ECONOMICS
1	Sponsorship	A brand pays to be the only voice from its sector, associated with your content.	One exclusive brand per sector across ~30 target sectors (telecom, fintech, banking, beverages, beauty, remittance...); sold at platform / channel / franchise tiers.	\$3,000–\$10,000 segment · \$12,000–\$35,000 channel · \$40,000–\$120,000 platform, per year.
2	Partnerships	Two parties combine assets (content, tech, distribution, credibility) and share the upside.	Content-owner rev-share deals; ad-tech/traffic partnerships; event partnerships (fashion week, food fair); institutional partnerships (EXMAN, BON).	Value often non-cash (traded assets); formalise with a 5-point term sheet — contribution, split, cadence, exclusivity, trigger date.
3	SMS/USSD Voting	Viewers pay a small fee to vote; the fee is split with the telco and aggregator.	Pageant and talent-show finales; multi-week voting windows promoted across the whole bouquet; needs a diaspora-capable billing path.	Net \$0.05–\$0.15/vote to platform after splits; a strong multi-country finale can yield \$36,000–\$108,000+.
4	AVOD	Free on-demand content, funded by ads inserted into the stream.	The base layer under CPM, sponsorship and programmatic; server-side ad insertion (SSAI) so it works on every device and resists ad-blockers.	Revenue = impressions × fill rate × CPM ÷ 1,000. Example: 2M impressions × 55% fill × \$6 CPM ≈ \$6,600/month.
5	CTV	Streaming delivered to the household TV — a smart TV, stick, or set-top box.	Aggregator placement first for fast reach; native smart-TV/streaming-device apps next; sold as the premium tier inside every sponsorship pitch.	Commands 1.5×–4× the CPM of mobile/web video for the same audience.
6	Programmatic	Automated, real-time auctions fill inventory your direct sales team hasn't sold yet.	The safety net under direct sales; needs an ad-server/SSP partner and category block-lists to protect exclusivity deals.	20%–40% of a comparable direct-sold rate, but near-100% fill at zero incremental sales cost.
7	Virtual Advertising	Digitally inserted branding renders differently into the same live broadcast for different feeds.	One live multi-country event (e.g. a pageant finale) carries a different sponsor for the diaspora feed than for the domestic feed.	1.5×–3× incremental ad revenue from the exact same production, no extra shoot cost.
8	Competitions & Prizes	A format-design discipline that bundles sponsorship, voting and advertising into one property.	The multi-country pageant and a proposed pan-African media-entrepreneurship competition; prize funded in-kind by a sponsor, not by the platform.	Stacks 4–5 revenue lines per season from one production budget.
9	Software, AI & Apps	License the tech you already had to build for yourself to other operators.	The FAST-services arm (channel engine, playout, CMS) sold to independent channel owners and content-competition organisers.	Published tiers: ~\$18,000 (1–2 channels) up to \$90,000+/yr (10+ channels, custom).
10	SVOD / TVOD / VOD	Subscription or pay-per-title models — the ones this platform deliberately does not run.	Stays FAST-first, on purpose: prior telecom-backed platforms collapsed when ad-revenue share went unpaid. Guaranteed licence fees solve the trust gap instead.	Reserved only for a possible future narrow TVOD pilot on scarce premium titles, once the ad-funded base is proven.
11	Content & Channel Exchanges	Two platforms trade content or carriage instead of exchanging cash.	Trade bouquet slots with a complementary (not competing) platform; trade services across the group's own divisions before looking outside.	Value every trade at its cash-equivalent sponsorship/CPM price — never "no money, so no value."
12	Channel Sponsorship & CPM Compute	Cost a channel properly, then price its CPM/sponsorship from real cost + margin.	Five-bucket cost model per channel: content licensing, delivery/CDN, playout/infrastructure, ad operations, sales & account management.	Break-even CPM = annual cost ÷ impressions × 1,000. Target CPM = break-even ÷ (1 – target margin).

STACK, DON'T CHOOSE — Run sponsorship + AVOD + programmatic + CTV on every channel by default. Layer voting and competitions onto flagship formats. Use exchanges and software licensing to grow reach and margin without new cash cost. Price every channel from Book 12's real cost model — never from a guessed rate card.
