

**ASIKO TV**

THE SOUL OF AFRICA

— READINESS CHECKLIST

Ready to sit with **investors** & channel owners

What's done, what to fix before a meeting, and what only you can decide.

● done ● in progress / partial ● not started tag = whose job

Do these first — blockers for any meeting

- **asiko.africa live** (YOU)
Add the four apex A records in Namecheap. Demoing on a github.io URL undercuts the pitch. ~5 min my side once DNS resolves.
- **Playout access** (YOU)
Eyevinn billing cleared, or SSH to the KVM8. Without it, "is any of this real?" has no good answer beyond the trail doc.
- **"Terms · Privacy" footer link in the app** (ME)
Placeholder links are enough for the demo; shows it's considered. Real drafting is a lawyer task before Phase 1 ads.

For investors

HAVE / READY

- **Working branded demo** — 22 channels + 2 live, Asiko-skinned, organised Browse view with genre rows, competitions and voting.
- **Monetisation model, visualised** — live revenue panel: fill, eCPM, gross, Direct / Programmatic / House split.

- **The document set** — revised architecture, trail-to-launch with financials, onboarding & ad-revenue, design spec, week-1 plan. All in the repo and as shareable pages.

- **Phased plan with numbers** — POC → MVP → pilot → launch, cost ladder, break-even in viewer-hours, monetisation growth path.

MUST FIX BEFORE THE MEETING

- **The demo on the brand domain** — see blockers above.

- **The ask** (YOU) — how much you're raising, use of funds, valuation. I can structure it once you set the numbers.

- **Team slide** (YOU) — who builds and operates this. "Founder + AI assistant" invites the question; have the hiring / Enveu answer ready.

- **Content strategy, one page** (YOU) — the biggest risk. Credible mix: partner feeds + a licensed diaspora library + owned production.

- **"Why Asiko wins"** (YOU) — one slide vs GenXT, Kulture Streams, Edo Kulture Streams and the global FAST players. Diaspora focus, the culture, first-mover in the niche.

- **Traction proof, however small** — one real channel running, or letters of intent from the 10 companies. Turns a pitch into evidence.

For prospective channel owners

HAVE / READY

- **"List Your Channel" pack** — feed spec, SCTE-35, ad policy, EPG, rights, brand assets, the 5-step onboarding flow.

- **Their slot, visible** — the Browse view shows genre rows with "List your channel" tiles; competitions have a dedicated row.

- **Revenue-share model explained** — clean feed / reserved pods / baked-in, with typical splits.

MUST FIX BEFORE SIGNING ANYONE

- **A listing-agreement template** (YOU + LAWYER) — a contract, not just the pack.
- **A real test-channel environment** (ME) — take their HLS feed and show it running end to end. Needs playout access (blockers above).
- **Rate card & rev-share terms in writing** (YOU) — specifics, not ranges.
- **A monthly-statement mock** (ME) — what reporting they receive.

Legal & ops — before real ads run

- **Privacy Policy** (LAWYER) — mandatory. Ad targeting = personal data under UK/EU GDPR from day one.
- **Cookie / consent banner (CMP)** (ME + POLICY) — mandatory in UK/EU before programmatic ads. The POC has none.
- **Terms of Use** (LAWYER) — liability, acceptable use, content disclaimers.
- **Company entity + bank + billing** (YOU) — needed to contract with an SSP / ad server.
- **B2B pipeline tracker (light CRM)** (YOU) — for the 10 companies, advertisers, competition entrants. A shared sheet is enough to start.

Legal pages live canonically on **asiko.live** but must be **linked from inside the app** — that's where data is collected. Ad rate cards and business terms stay as sales collateral, not consumer legal.

Roadmap — acknowledge, don't hide

These are expected gaps at POC stage. The trail-to-launch doc frames them as deliberate phases — say so in the room rather than gloss over them.

- **CTV apps** — Roku, Fire TV, Samsung, LG. Where FAST money is. Phase 2.
- **Real server-side ad insertion (SSAI)** — Eyevinn SGAI + an ad decision server. Phase 1–2.

- **CMS for scheduling & channel ops** — Enveu scope, or built. Phase 2.
- **Live: DVR / catch-up / SCTE-35 ad breaks** — not off-the-shelf; needs building. Phase 2–3.
- **Real voting backend** — the competition rows are a mock today; a real service drops into that seam. MVP+.
- **AVOD on-demand → TVOD "Asiko Cinemas" → SVOD tier** — the monetisation growth path. Upside, not the plan.

What only you can decide

- **The raise** — amount, valuation, use of funds.
- **Enveu — yes or no** — the \$13k build partner, committed against Phase-2 data.
- **Content** — what actually plays: deals, licences, owned production.
- **Team** — hires, or lean on a build partner + managed ops.
- **Territory & entity** — where Asiko is registered; which markets first.
