

What **asiko.africa** should look like

The streaming app — identity, layout, components and device behaviour — built on the identity already established at asiko.live.

PROPERTY

asiko.africa — the streaming product

SIBLING

asiko.live — sales funnel (live)

RELATIONSHIP

Same brand, different job

SOURCE OF TRUTH

asiko.live stylesheet + brand

TAGLINE

The Soul of Africa

POSITIONING

One Africa. One Market.
One Destination.

01

Same brand, different job

asiko.live sells. asiko.africa is watched. They must be unmistakably the same company and structurally nothing alike.

CARRIES ACROSS (IDENTICAL)	DIVERGES (BY DESIGN)
Logo, wordmark, "The Soul of Africa" lockup	Layout — the app is chrome-light, the funnel is a scrolling marketing page
Palette — near-black ground, gold primary, warm white text	Density — the app is a 10-foot / lean-back surface, not a reading page
Type — Poppins display, Inter body	Interaction — channel surfing, a guide, an ad-break state; no CTAs to "sign up"
Voice — pan-African, warm, direct	Motion — minimal and functional, not promotional

Shape language — soft radii, pill buttons

No login, no marketing sections, no footer nav

02

Identity — locked to asiko.live

Colour

Lifted verbatim from the asiko.live stylesheet. The app uses the same token names.

TOKEN	VALUE	ROLE IN THE APP
--bg	 #0a0a0c	Player letterbox, base ground
--bg-soft	 #0f0f12	Guide backdrop, sheets
--panel	 #17171b	Channel rail cards, guide cells
--panel-2	 #1e1e23	Active card, hover, pressed
--gold	 #d8a94b	Primary accent — active channel, focus ring, key numbers, LIVE-adjacent marks
--gold-bright	 #f3cd7e	Hover state of gold, headings within body
--gold-deep	 #a8792c	Pressed gold, section numerals
--white	 #f7f5f0	All reading text and titles
--muted	 #a7a4ac	Secondary text — NEXT, timestamps, genres
--muted-2	 #716f78	Tertiary — labels, disabled
--red	 #df3b34	Reserved: the LIVE dot and the guide "now" line only

Gold is a UI and large-text colour, never body copy. Reading text is always `--white` on `--bg`. Red is reserved for "live now" signalling — nothing else.

Typography

- ◆ **Display — Poppins.** Weights 800 for screen titles and sponsor names, 700 for section heads, 600 for channel names and buttons. Tight tracking (`-0.02em`) at large sizes, as on asiko.live.
- ◆ **Body / UI — Inter.** 400–600. Programme titles, guide text, metadata.
- ◆ **Data — monospace.** The on-screen clock, countdowns and timecodes use a tabular mono so digits don't jitter.
- ◆ Both Poppins and Inter are open-licence (OFL) — no licensing cost, safe to embed in web and TV builds.

Logo & shape

- ◆ Full lockup — gold angular "A" mark + **ASIKO** wordmark + **THE SOUL OF AFRICA** under-line, on dark only.
- ◆ The "A" mark alone is the app icon, the favicon, and the small-space / TV-tile mark.
- ◆ Clear space around the lockup = the height of the "A". Minimum wordmark height 16px web, 28px TV.
- ◆ Radii `6 / 10 / 18px`; buttons and badges are full pills (`999px`), matching asiko.live.

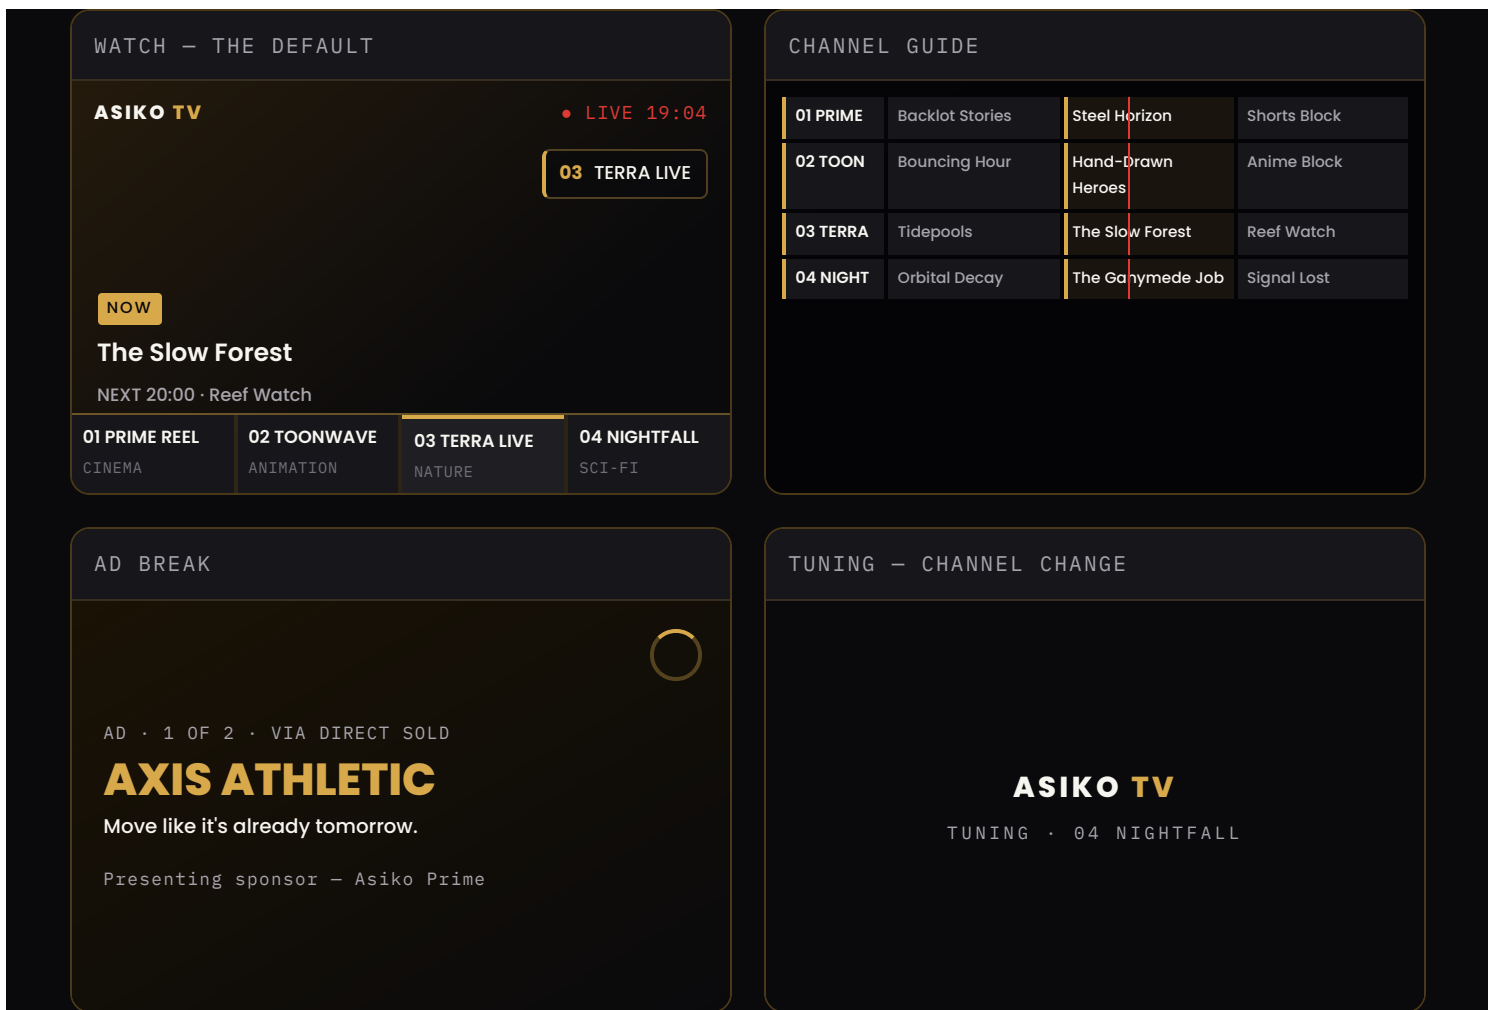

Voice

Warm, pan-African, plain. "One Africa. One Market. One Destination." · "The Soul of Africa." · "Built for how Africa actually watches." On-screen text is short and declarative — channel names, programme titles, "UP NEXT", "AD BREAK", never marketing lines inside the player.

03

The screens

Four states. Everything else is a variation of these.

Watch (default)

- ◆ Full-bleed player on `--bg`. No persistent controls — they fade in on interaction and auto-hide after 3s.
- ◆ Top bar: logo mark left · LIVE dot + network clock centre · Guide + audio toggle right.
- ◆ Channel bug top-right: channel number in gold, name in white, a 2px gold left rule. Persistent, low opacity.
- ◆ Lower-third: NOW tag (gold), programme title (Poppins 600), a thin progress line, then NEXT in muted with its start time.
- ◆ Channel rail along the bottom: one card per channel — number, name, genre, now-playing line. Active card lifts to `--pane1-2` with a gold top border. Horizontal scroll / D-pad.
- ◆ Optional sponsor strip (see §4) sits under the rail, not over the video.

Channel guide

- ◆ Slides up over the player (player keeps running, ducked). `--bg-soft` at 96%.

- ◆ Channels down the left (`--panel` label cells, gold left rule); programmes across in a time grid.
- ◆ The live cell is `--gold-wash` with an inset gold rule. A single `--red` vertical "now" line crosses all rows.
- ◆ Select a cell → tune to that channel and dismiss. Escape / Back closes.

Ad break

- ◆ Full-screen branded slate — **not** a black gap. Gradient from `--gold-deep`-tinted black to `--bg`.
- ◆ Top line (mono, muted): `AD · n OF N · VIA {DIRECT SOLD | PROGRAMMATIC | HOUSE}` — names the demand path, which is the monetisation story.
- ◆ Sponsor name huge in gold (Poppins 800), one line of copy in white, a deal reference in muted.
- ◆ Countdown ring top-right in gold. On completion, "Tuning" ident, then rejoin live.
- ◆ This screen is the seam where real SSAI creative renders later — same layout, real ad.

Tuning & edge states

- ◆ **Channel change:** ~600ms — black, logo mark, "TUNING · {NN NAME}".
- ◆ **First load:** logo mark centred, "Bringing Africa online...", then straight into the last-watched channel.
- ◆ **Signal lost / offline:** muted card, "Reconnecting...", auto-retry. Never a browser error.

04

Components

COMPONENT	ANATOMY & TOKENS	BEHAVIOUR
Top bar	Logo mark · centre clock (mono) · Guide + sound buttons (secondary pill, <code>--panel</code> / <code>--line</code>)	Auto-hide with controls; always reachable on Menu/Up
Channel bug	<code>--gold</code> number · <code>--white</code> name · 2px gold left rule · <code>rgba(bg,.6)</code> fill	Persistent; fades to 40% after 5s idle

COMPONENT	ANATOMY & TOKENS	BEHAVIOUR
Lower-third	NOW pill (gold/ink) · title Poppins 600 · 2px progress track (gold fill) · NEXT muted	Updates on programme boundary; slides on channel change
Rail card	<code>--panel</code> → active <code>--panel-2</code> + 2px gold top border · number / name / genre / now-line	Focus = gold ring; click / OK tunes; horizontal scroll or D-pad
Guide cell	<code>--panel</code> ; live = <code>--gold-wash</code> + inset gold rule; width ∝ duration	Focusable; OK tunes + closes guide
Now-line	1px <code>--red</code> , full height of the grid	Advances in real time; the only red in the product
Ad slate	Gradient ground · mono meta line · sponsor Poppins 800 gold · gold countdown ring	Locks input except audio; rejoins on complete
Sponsor strip	Under the rail · "SPONSORED" mono label · brand + one line · house style when unsold	Rotates on a timer; never overlays video
Buttons	Primary = gold pill, ink text (rare in-app). Secondary = <code>--panel</code> pill, <code>--white</code> text, <code>--line</code> border	Focus = gold ring, offset 2px
Badges	LIVE = <code>--red</code> dot + label. Genre = mono, <code>--muted-2</code> , uppercase, letter-spaced	Static

05

Device matrix

Asiko is "every screen." The layout re-flows; the identity does not.

SURFACE	LAYOUT	INPUT & NOTES
Desktop web	Player fills the viewport; rail along the bottom; guide slides up	Mouse + keys 1–9, G guide, M mute, ← → channel, F fullscreen. This is the POC today.
Tablet	Same as desktop; rail becomes a 2-row scroll; guide is full-screen	Touch; tap video to reveal controls
Mobile (portrait)	Player top (16:9), then NOW/NEXT, then a vertical channel list; guide is a full-screen sheet	Touch; swipe up = guide, swipe L/R on player = change channel

SURFACE	LAYOUT	INPUT & NOTES
TV / 10-foot	Player full-frame; rail overlays on Down; guide on Up/Menu. Type +2 steps up; 5% safe-area inset	D-pad only. Focus is always a visible gold ring or a gold-bordered card — never rely on colour-fill alone. Roku / Fire TV / Android TV.

06

Motion & accessibility

Motion — functional only

- ◆ Controls / lower-third: 150ms fade + 4px rise.
- ◆ Guide: 220ms slide-up.
- ◆ Ad countdown ring: linear, real-time.
- ◆ Now-line: continuous, no easing.
- ◆ No decorative motion, no parallax, no auto-playing hero flourishes — that lives on asiko.live, not in the player. Honour `prefers-reduced-motion`: cut all of the above to instant.

Accessibility

- ◆ Body text is `--white` on `--bg` — ~17:1, well past AA. Gold on black clears AA for large text and UI.
- ◆ Every focusable element shows a **2px gold ring, 2px offset**. TV focus additionally moves a gold-bordered card — state is never colour-only.
- ◆ **Captions / subtitles** toggle in the player; honour the platform caption style on TV.
- ◆ Support an **audio-description** track where the source carries one.
- ◆ Full keyboard and D-pad parity; the guide is a proper focus trap while open.
- ◆ Live region announces channel changes and "Ad break — 30 seconds".

07

From the POC to this

The proof of concept (github.com/johnupah-dev/asiko-tv-poc) already has the structure. It needs a re-skin, not a rebuild.

IN THE POC NOW	CHANGE TO HIT THIS SPEC
"Control-room" green accent <code>#37D497</code>	Swap for <code>--gold #d8a94b</code> across bug, active card, focus, numbers
Barlow Semi Condensed + IBM Plex Sans	Poppins (display) + Inter (body); keep mono for the clock
"ASIKO TV" text wordmark	Real logo lockup (mark + wordmark + "The Soul of Africa")
Placeholder channel names (PRIME REEL...)	Real Asiko bouquet names + per-channel logos
Guide grid — functional	Restyle to spec (gold-wash live cell, red now-line, label rules)
Ad slate — generic dark	Gold-gradient slate + "VIA {demand path}" meta line
Desktop only	Add mobile-portrait and TV/10-foot layouts

08

Assets to supply

- ◆ **Logo** — SVG of the full lockup and the "A" mark alone, on transparent.
- ◆ **App icon set** — 1024px master of the "A" mark on `--bg`; web favicon; TV tile art (Roku/Fire/Android sizes).
- ◆ **Channel logos** — one per channel, SVG or PNG on transparent, safe on dark.
- ◆ **Slate / ident** — a still "Asiko TV" holding frame for signal loss and pre-roll.
- ◆ **Sponsor placeholder** — the house-promo creative shown when an avail is unsold.
- ◆ **Fonts** — none needed; Poppins + Inter are free (OFL), embedded from Google Fonts on web and bundled in TV builds.
- ◆ **Colour** — none needed; tokens above are final and match asiko.live.
